

Algae-based materials and products

Thursday 20th April 2017

International Digital Laboratory, WMG

University of Warwick, UK

There is an ever-present need to remove the reliance on petrochemicals if we are to develop a more sustainable society. Algae present an as yet relatively untapped source of raw material for the preparation of many products, including plastics, adhesives, surfactants and inks.

In this workshop we will discuss the exploitation of algae as a feedstock, and highlight research from a number of EU projects in this area.

Further details of the programme can be found at:

<http://go.warwick.ac.uk/sustainablematerials/events/bisigodos-workshop>

The workshop is free to attend, but please register via the website
